

Clear Fork Trinity @ Trinity Park

*Site is sampled monthly

The Texas Commission on Environmental Quality considers a body of water acceptable for swimming, tubing, or boating when the long-term average bacteria concentration is below 126 bacteria per 100 milliliters of water and when a single sample is below 399 bacteria per 100 milliliters of water. Just like every other river in the state, levels may sometimes exceed these standards especially during and after rainfall.
